SUMMARY

I use AI to solve operational problems, from zero to result. Today I am the AI Builder at an accounting firm, automating tax, payroll and compliance work with Claude and APIs, and co-founder of Consulta Reforma, a tool that tells companies which suppliers will generate tax credits under Brazil's Tax Reform. I also built AI agents on WhatsApp (one before Meta AI existed), a financial automation with more than R$100k in transactions, and, at the startup where I intern, the WhatsApp messaging engine and the asset distribution engine. Before that, I ran payroll for 60+ companies. So I start from the process, not the tool.

WHAT I HAVE BUILT WITH AI

- **Consulta Reforma** (consultareforma.tec.br), co-founder. Tax-intelligence tool for Brazil's Tax Reform: from a company ID (CNPJ), it tells whether each supplier will generate CBS/IBS tax credits, its tax regime and the estimated annual credit. From my co-founder's scope as the industry expert, I built the website, the application, operations and sales. In early access, acquiring customers.
- **Guardian AI**: WhatsApp agent that monitors support groups and reports unanswered clients, rude messages and team response time.
- **Nath**: AI assistant on WhatsApp, launched before Meta AI · **Finn**: financial automation with R$100k+ in transactions · **ContMei**: accounting over WhatsApp for micro-entrepreneurs.
- **Jeti**: food-delivery business built from zero as a social project: pricing, logistics, purchasing, marketing and licensing; four-digit revenue on opening day.

EXPERIENCE

BZR Group | Startup · São Paulo, Brazil · Court-ordered debt (precatórios) unit
Business, Data & Automation Intern · May 2025 - present

- Built the WhatsApp messaging engine and the asset outreach flows across calls, WhatsApp, email and SMS, including outreach and follow-up for hunters and partners
- Built the priority and distribution engine for assets ready for negotiation, and the marketing and organic flows that route leads to account executives
- Automated portfolio monitoring: unanswered assets, active assets, top partners and ongoing negotiations
- Took part in building the company's first AI agent for customer service and negotiation
- Maintain the pricing flows (including the earlier Pipefy setup), validate pricings and handle complex cases: different courts, heirs, assignments and partial sales
- Built the first BI dashboards (Power BI and Looker) and pull data on the asset and partner fronts to find bottlenecks and backlogs

Accounting firm | through a process & operations automation partner
AI Builder · Freelance · Oct 2026 - present

- Building, on my own, the process, tooling and AI layer of the firm, starting with tax, payroll, compliance and productivity, using Claude, APIs and the firm's accounting tools
- Mapped the current operation: headcount that grows linearly with the number of client companies, the same work repeated for every client, internal errors (own, technical, organizational) and external ones (clients who do not send documents or answer questions)
- Implementing operational metrics and KPIs, which did not exist, to measure the before and after of automation

Fluence Accounting | Sorocaba, Brazil
Payroll & HR Operations Analyst · Jan 2023 - May 2025

- Ran the full payroll and HR operation for 60+ client companies: monthly payroll for 150+ people, hiring, terminations, vacations, leaves and union-agreement raises
- Calculated and filed payroll taxes (INSS, FGTS, IRRF) and mandatory reports (eSocial, EFD-Reinf) under legal deadlines and fines for errors; cleared overdue labor debts and served clients

EDUCATION & LANGUAGES

FATEC Sorocaba: Associate degree (Tecnólogo) in Systems Analysis and Development · 2022 - expected Jul 2027
ETEC Armando Pannunzio: Technical diploma in Business Administration · 2019 - 2021
International robotics: represented Brazil in a competition at the Technion (Israel)
Languages: Portuguese (native) · English (basic, technical reading; currently studying)

SKILLS

AI & agents: advanced prompt engineering, agent orchestration (Claude, GPT, Gemini), OpenAI API, AI-assisted data analysis
Automation: n8n, Make, Zapier, REST APIs, WhatsApp APIs (Z-API, Evolution, Meta)
Vibe coding: Claude Code, Cursor, v0, Bolt, Replit, Lovable; APIs and tools without a deep backend
Data: Python, SQL, Power BI, Looker, Google Data Studio, Amazon QuickSight, Google Sheets, advanced Excel
Business: Brazilian Tax Reform (CBS/IBS), pricing, CRM administration, process design and automation, regulated operations (payroll)
